*NOTE: We strongly recommend using a Hope BB with a Hope crankset although in theory any third party BB should be compatible with the Hope crankset as long as it is to suit a 30mm diameter shaft and the fully assembled width is within 1mm of the dimension specified on this document. However, we cannot accept responsibility for incompatibility due to the fact that it is not possible for us to check every manufacturers BB with our crankset.

⁽¹⁾ Use 133.5mm shaft length for 135mm, 142mm and 148mm rear dropout. Use 142.5mm shaft length with 2 x 4.5mm spacers (HC108-17N) for 157mm rear dropout.

⁽²⁾ Use 165.5mm shaft length for 170mm rear dropout. Use 185.5mm shaft length with 2 x 10mm spacers (HC105-48N) for 190mm rear dropout.
