*NOTE: We strongly recommend using a Hope BB with a Hope crankset although in theory any third party BB should be compatible with the Hope crankset as long as it is to suit a 30mm diameter shaft and the fully assembled width is within 1mm of the dimension specified on this document. However, we cannot accept responsibility for incompatibility due to the fact that it is not possible for us to check every manufacturers BB with our crankset. ⁽¹⁾ Use 172mm shaft length for 170mm rear dropout. Use 192mm shaft length with 2 x 10mm spacers (HC105-48) for 190mm rear dropout.
