

£195 Hope Vision Twin LED

HOPE 01282 851200 WWW.HOPEGB.COM WEIGHT 292G

Hope's Lancastrian twin lamp isn't the most powerful out there but makes up for it in versatility and value. The CNC machined alloy head uses a simple but effective cam QR as standard but there's a stem plate mounted version too. Hope include a helmet mount and extension lead, and new connectors make them impressively weatherproof.

The twin LEDs give a decent spread of light for overall awareness on tighter, slower trails and the big back-of-light switch is easy to find. The four different

power settings are useful for prolonging rides beyond the relatively short two-hour minimum. It lacks punch and range at higher speeds compared to others though, and there's no indicator to keep track of current brightness or remaining time either.

8

Decent value, compact bar or helmet lamp, but short on run time and reach
