

£205.00 Hope LED

HOPE WWW.HOPETECH.COM

TYPE LED X 2 BATTERY LI-ION RUN TIME 1.45-12 HOURS WEIGHT 352G

The Hope LED is every bit as gorgeous as their HID light, and as well as being an example of quite lovely engineering it is as practical and easy to use as you'd expect. Using the same mounting system as the HID, the battery sits neatly under the stem with the light centrally above. It's a cinch if you have a Hope stem, but they make options for other stems as well, and you can buy it with a bar/helmet mount option for maximum versatility. It is the closest thing we've found to perfection for

separate battery/light units. Courtesy of two flood LEDs, the light is outstanding. With more than enough power, the spread of the beam is very broad and has an even consistent tone. At a £200 price point you won't do better.

MBUK VERDICT

High performing light that makes it worth pushing your budget limit
