NOTE: 180, 183, 185, 200, 203 dia.

Over the years there has been some confusion over the "middle" sized disc. Although we will continue to manufacture 180mm discs and their corresponding H and J mounts, we have decided to standardise on the more common 180mm disc size.

NOTE:
Postmount tab position varies depending on the manufacturer's intended minimum rotor size. Please contact the fork or frame manufacturer to identify the Postmount standard being used.

Future Proofing:
For future proof assemblies preferentially use the following disc sizes:
140 / 160 / 180 / 200 / 220

- Recommended for modern braking systems
- Less common applications
